3 Project partners

4 Deliverables

An unparalleled biodiversity

TRIAS

Il y a 200 millions d'années

- Madagascar: top 3 of the countries with mega-diversity
- Vascular plants: 12000 species, endemism=85%
- Trees: endemism=96%
- Invertebrates: 5800 species, endemism=86%

Concentrated in forests

Tropical forests

>50% of the terrestrial species

1 Introduction

- Madagascar biodiversity
- Threats to biodiversity
- Objectives

2 Tasks

- Biodiversity map
- Biodiversity under climate change
- Deforestation models

3 Project partners

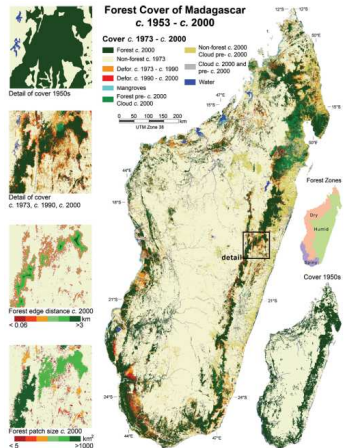

4 Deliverables

Deforestation and demography

- 10 to 15% of original forest
- Deforestation rate: $\sim 1\% \cdot \text{yr}^{-1}$
- 1950–2000: 10% of species committed to extinction

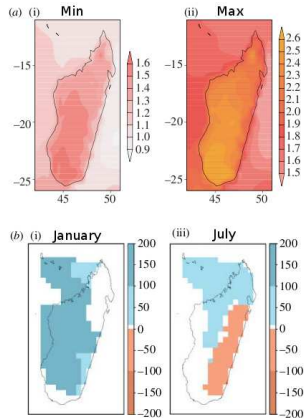

- Demographic rate: $> 3\% \cdot \text{yr}^{-1}$
- Doubling-time: 25 years

Predicted climate change

- Mean temperature increase: +1.1 to +2.7°C
- Wetter summer (up to +200 mm.yr⁻¹)
- Drier winter in the SE (down to -100 mm.yr⁻¹) and wetter winter elsewhere (up to +100 mm.yr⁻¹)

Predicted climate change

Andriamasimanana 2013, Vieilledent 2013, Raxworthy 2008

Predicted climate change

SDM approach
